AMS - basics exercise for setting rights on a corpus.

Go to your DOBES training node (under *MPI corpora/Demo/DOBES training*) where you have created the corpus structure during the LAMUS practical.

Right click the node and select 'set access rights'.
Login with the username and password as provided to you.

Normal user:
1. Create a user named "group#_testuser1" (where # is your group number), and give this user read access rights to all resources in the whole sub-corpus under your node.

Domain manager:
2. Allow the user "group#_testuser1" to create new users and to assign rules and roles to the node and subnodes.

Check:
3. Login as the newly created "group#_testuser1" and make sure that you are able to perform the tasks described under 2. **Note: To log in as another user you need to log out and then restart your browser**.

Group:
4. As "group#_testuser1", create a user named "group#_testuser2" and subsequently create a group named: "group#_testgroup1" which includes users "group#_testuser1" and "group#_testuser2".

5. Allow the group "group#_testgroup1" to access all media resources in your corpus.

License:
6. As "group#_testuser1" assign a license to the node (select the DoBeS license).

7. Try to access a media resource. You shouldn't have access anymore.

8. As "group#_testuser2" sign the license and observe that you now have access again.
